Service Details

The Regional Neurological Rehabilitation Unit (RNRU) specialises in early inpatient rehabilitation for young adult patients after single incident neurological events other than spinal injury. The unit is purpose built and has 24 beds.

Patients are usually referred from acute beds in neurosurgical/neurology units, or district general hospitals. Referral is generally through the responsible consultant in the acute hospital and should be made as soon as possible after acute illness.

To make a referral a letter from the medical team to the consultant neurologist at the RNRU accompanied by the referral form, obtained from the unit administrator.

Referrals are screened by the unit consultants prior to invitation to MDT assessment clinic appointments where decision to admit to RNRU is made, approximate time scale to admission discussed. Alternative units and services may also be highlighted. Site visits by RNRU staff are available on request to facilitate referral decision making.

Who to contact

**Name of venue**
Homerton University Hospital

**Venue address**
Regional Neurological Rehabilitation Unit  Homerton Row  Hackney  London

**Postcode**
E9 6SR

Other details

**Referral and availability notes**
Patients are usually referred from acute beds in neurosurgical, neurology units or district general hospitals. Referral is generally through the responsible consultant in the acute hospital and should be made as soon as possible after acute illness. This is done via completion of the RNRU referral form (which can be obtained from the unit administrator).
